Build Business Tools Faster, Simpler, and Inside Microsoft 365

Every business has those **headache workflows** that everyone hates, burn considerable time, but no off-the-shelf software can handle properly.

They're often held together with spreadsheets, SharePoint lists, Word templates, or a legacy system built by an ex-employee that "just about works". Replacing them with custom software has traditionally felt too expensive or risky, so businesses continue doing things the way they always have.

What this webinar will cover

In this webinar, Blue Llama show how **Microsoft Power Apps** is changing that.

You'll see how organisations are building **simple, bespoke internal tools inside Microsoft 365** to remove manual admin, reduce errors, and save significant time — all without the cost or delay of traditional custom development.

These tools act as a **clean, user-friendly front end** to your existing data and processes, allowing teams to take action, not just view reports.

Real-world examples

We'll walk through a real-world case study with **EYECAN**, where a highly bespoke, human-intensive process was turned into a self-service digital tool that dramatically reduced manual handling and integrated directly with existing systems.

We'll also look at how **D2 Real Estate** replaced a manual electricity meter-reading process with a mobile Power App that scans QR codes to capture readings automatically and sends the data straight into their system.

Who this session is for

This session is designed for **managing directors and operations professionals** who want to:

- Remove the "headache" tasks their teams hate dealing with
- Save time and improve productivity using systems they already trust
- Reduce reliance on spreadsheets and manual workarounds
- Build tools that actually fit how their organisation works

Do I need to be technical?

You don't need to be technical, and you don't need to build everything yourself.

The goal of this session is to help you **rethink what's now**

possible inside Microsoft 365, and where low-code tools like **Power Apps** can make a real, measurable difference to how your business runs.
