Your AI Coworker Is Here. Stop Chatting. Start Delegating.

12 pm to 1 pm | 23/04/2026 | Online event

Book now →

ChatGPT answered questions. Your AI coworker does the work. Join us for a live demo of what that actually looks like.

Book now

The AI landscape changed in January 2026.

Anthropic launched Claude Cowork, a desktop agent that does not just answer questions, it takes action. Microsoft followed within weeks with Copilot Cowork, built on the same underlying technology and embedded directly into Microsoft 365. Enterprise software stocks fell by a combined $285 billion in the days that followed. This is not hype. Something has genuinely shifted.

For the past few years, every business has been using the same tools — ChatGPT, Copilot, maybe a few automations to draft emails, summarise documents and answer questions. That is

the old world.

AI agents read your meeting transcripts, research your prospects, draft your follow-ups, raise your invoices, and work in the background while you get on with running your business.

In this session, Phil de Gruchy and Anish Bagga from Blue Llama will show you exactly what that looks like, live, on screen, in real time.

What you will see demonstrated live

- A cold outreach email researched and written from a single company URL
- A Fathom meeting transcript turned into action points and a drafted follow-up
- A workflow skill built from scratch, showing just how programmable these tools now are
- An invoice raised in Xero without opening the software

The landscape explained

We will cover what has actually changed across the main platforms, including Claude Cowork, Microsoft Copilot Cowork and Claude Code, and what each one means practically for a business your size. We will be direct about where each tool fits and where it does not.

What you will walk away with

A clear picture of the difference between AI assistants and AI agents, a realistic sense of what is possible right now, and a shortlist of tools worth exploring for your business.
